

Editing your website

Everything on megcmusic.com, and where to change it — Meghan Clarisse

The whole thing in one sentence. Every word and photo a visitor sees on megcmusic.com now lives in your WordPress dashboard. Edit it there, click *Update*, and the website rewrites itself — usually in about two and a half minutes. You never need to ask anyone.

01 How to change anything

1. Sign in at admin.megcmusic.com/wp-admin
2. Go to [Pages](#) and open the page from the table in the next section
3. Scroll past the page's own content — your website fields are in labelled boxes underneath
4. Change what you want and click **Update**
5. Wait about three minutes, then click **View Page** at the top of the editor (or refresh megcmusic.com)

View, **Preview** and **Visit Site** all open the real site, megcmusic.com — never the old one. They show what is *published*, so a change you have not saved yet will not be there, and a change you have just saved appears after the three minutes. If you ever land on a page with a big photo and a menu reading "Photos · Media — Videos · Shows", that is the old site on admin.megcmusic.com; close it and open megcmusic.com.

Every field has a grey line of help text under it telling you exactly where it appears. When in doubt, read that line — it was written for this.

02 Which dashboard page controls which part of the site

OPEN THIS PAGE	AND YOU'RE EDITING
Home	Your bio, the pull quote, the Recognition list, Instagram caption and handle, the mailing-list wording, your Facebook/Instagram/YouTube links, the site's main background photo — and the Blocks area, the What's New section (see 05)
Music	The Music page intro, and your whole release list — every album, EP and single, with its links and shop item. Feeds the Discography and Singles lists on Home too
EPK	The Press Kit: intro, the four quick facts, press-kit downloads, press coverage links, set-list intro, closing note
Media	The Media page intro line
Media — Videos	Which videos appear, and in what order, on Home and Media. It sits right under "Media" in your page list. The big player is the Featured video; every video in your

OPEN THIS PAGE	AND YOU'RE EDITING
	Video list appears beside it, in your order (the list scrolls when it is longer than the player) — the list is the site's playlist, so what you leave out stays off
Site: Poetry	The Poetry page — book title, opening line, the "Inside the Pages" paragraphs, and the Buy button
Booking	The Request a Gig intro, how-booking-works paragraph, the starred checklist, three quick facts
Shows / Shop	Just the intro line and search wording. The shows and products themselves work exactly as they always have
Collabs	The "Work With Me" groups on the Music page
Solo Acoustic Full Band	The two Live Format cards on the Music page — name, description, photo
FYC pages	Each award campaign — album, category, cycle, the pitch, press quotes, videos, lyric sheets
Release pages	Each record's own page, plus the press quotes shown on it

03 Three things are shared — change once, changes everywhere

Your bio and pull quote live on the *Home* page. They appear both in Liner Notes on the home page and as "The Story" on the Press Kit. Edit them in one place; both update.

Your release list lives on the *Music* page. It feeds the Discography on Home, Music and the Press Kit, the Singles list, and each release's own page.

The site photo lives on the *Home* page, under Site Basics. It is the background on every page. Any single page can override it with its own "Photo for this page" — leave that empty and the page uses the site photo, which is what they all do today.

Because the site photo touches every page, check with Levi before swapping it.

04 Your release list, in a little more detail

This is the one field worth understanding properly, because it drives more of the site than anything else. On the **Music** page, under *Your releases*, each row is one record:

Kind

Albums and EPs go in the Discography. Singles go in the Singles list, which appears on both Home and the Music page. That is the only thing that decides it.

Its page on this dashboard

Points at the WordPress page whose text and lyric images become that release's "About the Record" page. Set it and the release becomes clickable at *megcmusic.com/music/<that page's slug>* on its own — no one needs to change any code. Leave it empty and the release still lists; it just has no page to click into.

Shop item

The product behind the "Buy" button. Leave empty if it isn't sold.

Spotify / Apple link

This record's own link. Leave either empty and the site falls back to your artist profile, set further down the same page.

Order. Both lists sort themselves newest first by the Year you enter, so you can add a row anywhere and it lands in the right place.

05 The Blocks area on Home — what's new, in your words

On the **Home** page there is a tab called *Blocks*. Anything you add there appears on the home page in a section called **What's New**, between your Instagram photos and the press-kit teaser. Leave it empty and Home looks exactly as it does today — the section only exists while there is something in it.

Add a block

Click *Add a block* and pick one of three kinds. Fill it in, then *Update* the page as usual.

Announcement

A new single, an award, a tour date. The *Headline* is what people read first and is the one thing it needs. The small line above, the text and the link are all optional — a link shows only when you give it both its words and its address. A link to somewhere off your site opens in a new tab.

Pull quote

A review line, a kind word from a venue. Type the quote without quotation marks — the site adds them, in the same panel your Liner Notes quote uses. "Who said it" is optional.

Video

Any YouTube link — a watch link, a Shorts link, a share link. It shows as a player like the big one in the Videos section, with an optional one-line caption under it. A link that isn't YouTube shows nothing.

Move one

Drag a block by its handle to change the order. They appear on the site in the order you leave them.

Remove one

Hover a block and click the minus. When the last one goes, the What's New section goes with it.

A block missing its one required field (a headline, a quote, a YouTube link) simply doesn't show — nothing breaks. Old news is best removed rather than left: the section reads as "now".

06 What is not a field — and doesn't need to be

- **Your shows** — still added the way you always have, in The Events Calendar
- **Your shop products** — still WooCommerce, unchanged, including prices and stock
- **Your photo galleries** — the Media page pulls from your Photos page
- **Your sample set list** — still its own page; the Press Kit links to it
- **Lyric-sheet descriptions** — set on the image itself in the Media Library, not in the gallery field
- **The design** — colours, fonts, spacing and layout are fixed. Nothing you type can break how the site looks.

07 If your change doesn't show up

Work down this list. It is almost always the first one.

1. **Wait three minutes and refresh.** The site rebuilds itself after you save; it is not instant. Give it the full three minutes before deciding something is wrong.
2. **Force a fresh copy.** Hold *Shift* and click reload — your browser may be showing you the page it already had.
3. **Open the page and click Update again.** A second save re-sends the signal, and this fixes it more often than you'd expect.
4. **Tell Levi.** Say which page you edited and roughly when. Nothing you can do in the dashboard breaks the site — the worst case is that a change sits and waits.

The site also rebuilds itself every night, so even a signal that goes missing entirely will have caught up by the next morning.

08 Two small habits worth having

Leave a field empty rather than deleting the box. Empty means "use what the site does today" almost everywhere — the Buy link, a page's own photo, a release's Spotify link. It is a safe thing to do.

Change one thing, check it, then change the next. Not because anything will break, but because if something does look off you will know immediately what caused it.
